Years of arthroscopic innovation to surgical solutions for the forefoot.

Mini Scorpion™ DX CPR™ Technique

Grasp, pass and retrieve.

The Mini Scorpion DX has FastPass technology to automatically retrieve FiberWire® suture, after passing through soft tissue. The instrument works well under direct visualization, as well as “blind” passes through the plantar plate tissue, where access and visualization are often limited.

With ...

- Direct repair from a dorsal incision to treat and prevent crossover and floating toe

...Or Without Osteotomy

- Reconstruct the soft tissue complex to its anatomic state, eliminating 2nd MTP joint instability

CPR Viper™ Suture Passer

Building on years of expertise in upper extremity innovation, these state-of-the-art suture passing techniques have been adapted for the plantar plate repair of the forefoot.

CPR Viper can be used in tight spaces with or without a shortening osteotomy.

Mini Scorpion™ DX CPR™ Instrument Set – AR-8690S

AR-8692DS Implant System
*CPR Viper™ suture passer,
FiberWire® suture, and
Suture Passers

AR-8690DS Implant System offers a combined set of the
Mini Scorpion DX Needle, Micro SutureLassos™, FiberWire,
QuickFix™ Snap-off Screws, and Suture Passers.
